Single Use Electrosurgical Knife KD-625

HookKnife J™

New jet function to help shorten procedure time
Advancing the Evolution of HookKnife J™

Submucosal injection capability supports more reliable and more effective ESD performance.

Now the HookKnife™ does even more. With the addition of a convenient jet, the new and evolved HookKnife J™ will help you work and reduce the time it takes to perform an ESD procedure.

The new HookKnife J™ is designed to help you take advantage of the hooking technique. Using this technique will help you dissect fibrotic tissue in a narrow lumen with precision and control — even from a perpendicular direction.

**Distal L-Shaped Hook**
Ideal for hooking tissue and pulling it away from the mucosa and proper muscle layer, even from a perpendicular direction.

**Rotation and lock function**
Rotatable when the handle is moved slightly back, Locked when the handle is maximally extended.

**Submucosal Injection**
The addition of a new jet function lets you perform saline injection after cutting — without replacing the device.

**Example of flow of ESD procedure using the HookKnife J™**

**Two Versions**
Designed for use in the upper and lower gastrointestinal tract.

**How to use the HookKnife J™**

1. Pull the slider gently to draw the knife tip back slightly.
2. While holding the sheaths, turn the handle slowly and align the direction of the hook.
3. Extend the knife and lock it.

Please refer to the instructions provided with the device for instruction in details.
